

## **BUNTING**® Magnetics Co.

### Calibration and Certification Service Call

Bunting Magnetics Co. offers a Calibration and Certification service for Bunting Magnetics Metal detectors. This service is performed by one of our factory trained technicians and includes the following inspections:

1. Sensitivity certification using your test pieces. Both dry (without product) and with product settings.
2. Functioning of reject devise if installed.
3. Detection of test pieces at conveying speed.
4. Detection of big metal piece at conveying speed.
5. Sensing cable condition and connections.
6. Inspection of IP standards.
7. Filter settings relating to conveying speed.
8. Grounding connections and isolation points.
9. Saving parameter settings if applicable.

After the inspection is finished a calibration sticker will be placed on the electronics box. The Bunting Technician will then be available to offer training or answer questions about the operation of your detector. A calibration certificate will be completed and emailed to a contact of your choice.

Our goal is to see that your Bunting Magnetics Metal Detector is operating within specifications. We suggest a yearly inspection and certification at the minimum. Appointments may be scheduled by email or phone.
