

Dragslide Conveyors

Bunting® offers multiple styles of DragSlide Conveyors & Conveyor Systems for Plastic, Paper, Rubber, Wood, Carpet and Electronic Recycling. The DragSlide was originally designed for the thin mil plastic film industry to solve the problem of static electricity.

These conveyors are totally enclosed and use UHMW drag flights in a chain conveyor design to move and convey material within a sealed conveyor. This makes for a much cleaner facility allowing you to use your employees for production vs. clean-up maintenance.

Specifications:

Width	18", 24" and 30"
